

With more than 30 years of experience in the food processing industry and specialized teams of developers, technicians and project managers, CFS is the leader in integrated systems.

We are developing exciting new software and hardware solutions to enhance the efficiency of Sizing, Production, Inventory, Shipping and Receiving Systems.

Computerway Products for Further Processing

R7 Production, Inventory, Shipping

State-of-the art plant floor production and inventory control system designed specifically for the food processing industry. Computerway systems across the US and Canada are proof of the reliable and accountable systems.

- Weigh and Label product
- Palletize for Real-Time Inventory
- Manage Shipping - Picking Orders, Shipping Documents and In-Plant Displays to monitor activity
- Configure and automate Reports
- Increase Recall and Traceability

Packaging Materials Inventory

Receive materials against POs/Manifests to achieve a real-time inventory of packaging. Identify and reduce variance/loss and improve FIFO and reorder efficiency.

Traceability - Recall

The horizons of Recall in food processing are always expanding. CFS systems track cases/pallets from production to the customer and can link packaging materials to finished goods.

There are many more systems solutions available. Call us to discuss your operations. [336.841.7289]

- *PT-Process Tracking:* Traceability and efficiency for further processing operations
- *Corporate Q:* Enterprise level inventory and traceability across multiple facilities
- *QC-Quality Control:* Product testing and data recording
- *Interfaces:* Variable ERP connections across multiple platforms

Sizing Systems and Solutions for Production

The WOLF ISS (Integrated Sizing System) from Computerway is the most technologically advanced concept in overhead sizing line controls ever built. The Wolf Integrated Sizing System can control more sizing lines with greater capacity and superior overall accuracy and unmatched reliability. This revolutionary system can dramatically impact plant efficiency and profitability.

CFS 24x7 HelpDesk

Computerway HelpDesk provides around-the-clock assistance for operations, allowing maximum efficiency with CFS Systems. HelpDesk Technicians are available 24x7 for production, shipping, processing support. Support call details are logged for trending and reporting access. The HelpDesk connects daily to CFS servers to pull system logs and alert System Administrators of any issues. On a monthly basis, the HelpDesk pulls 'core data' from each CFS system to store as an extended option in the event of disaster recovery.

For more than 15 years, CFS HelpDesk has kept shipping docks rolling, supported shift supervisors through the night, enabled Plant Manager awareness of system usage and procedure violations, prevented system failures, performed database maintenance and restored systems after failure.

The CFS HelpDesk is more than a support desk.
It is **Critical System Security and Reliability.**
