A Journal of Industrial Technology
March-April 2016

Computerway Food Systems is the leading supplier of production, inventory and shipping systems. With the rate of policy and technology changes in the food industry today, Computerway's modular systems are constantly expanding and improving.

Computerway Systems

All New: Yield Monitoring System

April 2016 - CFS introduces the **Yield Monitoring System (YMS)**, v1 Thigh Deboning.

YMS advanced technology utilizes hopper weighers and specialized sensors to gather input and output product weights through automated deboning machines, while simultaneously monitoring machine capacity, speed and throughput.

YMS was developed specifically for the Meyn TDS (Thigh Deboning Solution M1.0) and can be applied to virtually **any automated process where yield is critical**. YMS is real-time and highly configurable to accommodate complex yield-sensitive operations. With large in-plant monitors displaying the information, plant operations can respond with adjustments to operating parameters.

Typical data displays rotate between multiple screens to include: machine speed, actual parts per minute, continuous input and output weight data, current and batch yield, machine uptime/downtime and summary information for each shift.

The new Computerway Scanning application uses a simple design for inventory and shipping operations. The screens are clean and easy to understand. The updated design improves efficiency and slashes training time by simplifying procedures and ease of use.

Nimbus is running at multiple beta sites now and will be available with R8.

The R7 - R8 Timeline

CFS is continuing to move forward with development of R8 with a planned release date later this year. This new phase of Computerway's Production and Inventory control systems provides improvements and enhancements to the core application. It includes the all-new Scanning (Nimbus) and ties in the [Packaging and Dry Goods Inventory and Traceability](#) module.

R8 Benefits:

- Time-tested and trusted production and inventory controls
- Management tools uniquely configurable for operations and customer requirements
- Real-time data with built-in Recall and Traceability
- Years of experience and user requests comprising the advanced core of R8
- The most reliable 24x7 HelpDesk support in the industry

Request Info

Sizing Systems

Digital Scale Controller (dSC)

Wolf Weigh Station calibration with the new dSC is quick and easy. Easier calibration results in greater daily accuracy for all sizing line operations. Over 100 dSCs have been installed in plants to date.

Video

Request Quote

New Features Wolf v. 3.10.0.0

Partial/Negative Pitches

Dial in the outputs using fractions of a pitch

Weight Band Check Alarm

A warning if not all weight bands are assigned

New Grader Design

New grading technology
No calibration required and no jams on the line

One Leg Detect & Eject

Detects swinging birds better than ever

Virtual Scale

Manage product flow for different zones on the line
Without adding a physical scaling station

DataDen Archive

Save Wolf data for up to 3 weeks
Run reports on histograms, line speeds and settings

Remote I/O

Monitor switches/sensors, turn selections on/off,
Disable outputs, turn on an alternate drop,
Reset batching - All from anywhere in the plant

CFS News

CFS is bursting at the seams and we are so excited about it!

Celebrating 30 years!

Computerway is celebrating the third decade of innovation and integration in technology, expanding experience in food processing and its tremendous compassion for the local community.

We will be sharing exciting plans over the upcoming months!

New Faces!

The CFS family is growing in every direction.

New Site!

We are working on an overhaul! Our website is getting an updated face along with new features. Be sure to check back in the coming months to see the transition.

Focus newsletters, just like the one you are reading, will be available on the new site too.

More updates will follow as the plan unfolds.
